WASHINGTON STATE UNIVERSITY
EXTENSION

Recommended Reading

(from the Stewardship Handbook folder in the Publication Library unless otherwise indicated)

1. * [*Silviculture for Washington Family Forests*](#)
2. * [*Management Options for Declining Red Alder Forests*](#)
3. [*Thinning: An Important Timber Management Tool*](#)
4. [*Conifer Pruning Basics*](#)
5. [*Planting Forest Seedlings*](#)

Recommended Activities

1. *If you are managing for timber production, outline the key future steps in the Forest Inventory/Timber/Wood Products section of your plan (Resource Category 4) as you are able. Discuss planting/brush control needs, if/when thinning will be needed, pruning for wood quality, when the end of the rotation (regeneration harvest) will be, and subsequent replanting plan after harvest. Use the [examples](#) as a guide. You will be adding more to this after the inventory sessions. If you are not managing for timber production, you may not have much to include here until you are ready to gather inventory information.
2. *Draft the Property Access/Roads/Skid Trails (Resource Category 5) and Aesthetics and Recreation (Resource Category 8) sections of your plan. Use the [examples](#) for guidance.

** Top priorities for this week*
