WILDFIRE

Putting Your Forest to Work

Owners of private land are inspired to maintain healthy and productive forests for many reasons. Generally, family forest owners control land for hunting and recreational opportunities, periodic revenues from harvesting timber and grazing livestock, and to preserve a rural lifestyle and to pass along their legacy. Forests can provide both a lifestyle and living, but to do so almost always requires **active management**—actions such as timber harvesting, tree planting, thinning, grazing, weed control, and other activities for improving wildlife habitat, controlling erosion, fire suppression and fuel treatment, and road and trail maintenance. The outcome of executing these practices can be good, bad, or ugly. **Passive management** nearly always results in unhealthy forests predisposed to damage by tree-killing insect infestations, diseases, wildfire, and become poor wildlife habitat.
